

Total solutions provider for micro-fabrication technology

With commissioned processing/development of film formation at its core, and utilizing semiconductor submicron technology (film formation, photolithography, etching, etc.), Kyodo International Inc. provides extensive solutions including; MEMS sensors and nano-imprint lithography. Through its operations, the company will achieve a decrease in research and development costs and timeframe.

The company handles solutions from the experimental production of a single product to the medium-to-mass output manufacturing of products.

Furthermore examination/development tools intended for research use is sold, and the licensing of intellectual property is also handled. Industry-academia partnerships in technological development are also actively promoted (including collaboration with Keio University's Taguchi Laboratory, etc.)
