

Y's Global Vision, Inc.

Smart Water Grid Company

We are developing businesses related to "water" with a focus on the world's smallest and lightest class seawater desalination equipment. We aim to improve the utilization level of water itself by converting water in various states into the required state (drinking water, water for daily life, water for industry, etc.) and at the same time monitoring the operation status of the equipment and water quality with sensors. Our mission is to deliver safe and reliable water to the world at a lower cost and with less environmental impact.
